PRESS RELEASE

September 7, 2018

MCMILLEN ENGINEERING HOLDS INFORMATIONAL ELECTRICAL WORKSHOP TO REVIEW PERTINENT CODE CHANGES

Analysis of the 2014 National Electrical Code Changes was held on September 5, 2018 at the Penn State Fayette, Eberly Campus, hosted by McMillen Engineering, Inc. The workshop was presented by Mr. Jack E. Jamison, Jr., ICC Master Code Professional and IAEI Certified Electrical Inspector Master, to review the changes that affect electrical standards.

“We believe in the importance of education through these types of workshops. Because the requirements state that all permits issued after October 1 of this year must comply with these changes, we thought that the timing was very appropriate,” said Terry McMillen, Sr., President of McMillen Engineering, Inc.

Fifty professionals – including electricians, inspectors, contractors and engineers – registered for and attended the event, where they also had the opportunity to purchase the *IAEI 2014 Code Analysis of Changes* reference book. Continuing education credits were also available for those interested.

“These types of workshops offer a great way to inform,” said Mr. Jamison. “It’s crucial to the safe installation of electrical wiring and equipment that these changes are known and understood by the professionals completing the work.”

McMillen Engineering is a full service civil engineering and land surveying firm located in the Fayette County Business Park in Uniontown, Fayette County, Pennsylvania. For more information, visit mcmilleng.com.
